Applicant's election without traverse of Group II-Figures 4-9 in the reply filed on 8/14/2008 is acknowledged.

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

The applicant's information disclosure statement dated 7/6/2005 has been considered and a copy has been placed in the file.

The substitute specification has been considered and approved by the Examiner.

The drawings are objected to because all of the Figures are not clean, crisp, and clearly understandable. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date

of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. With the current drawings, the Examiner is unable to decipher or understand how and where the pivot arms are connected, which ends of the pivot arms slide and in what frame are they sliding, how the handle (when rotated) pivotally moves the leaf (window sash) and how the handle is connected to the elements to allow pivotal movement of the sash/leaf within the fixed frame?

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

As best understood, claims 1-15 are further rejected under 35 U.S.C. 102(b) as being anticipated by Neal et al. (3,101,135). Neal et al. (3,101,135) discloses a mounting unit for a window comprising a frame (1), a leaf (10) mounted to the frame and

Art Unit: 3634

movable from a closed position by at least one curved guiding mechanism (33 or 37) about a vertical axis (vertical and horizontal are relative terms and depending on how the window sash is mounted depends on which direction the pivot axis rotates about), at least one upper (17) and lower (18) guiding mechanism that slides within both the frame of the leaf/sash (10) and the frame (1) such that the frame is held in place when in an open position via multiple links (20, 21, and 22).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Several patents have been cited which disclose various types of linkages mounted between a sash/leaf and the frame similar to that of the applicant's invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry Redman whose telephone number is 571-272-6835. The examiner can normally be reached on M-TH from 8 to 6.
